Flask

설치 환경

- Python 3.8

```
beautifulsoup4
colorama==0.4.6
openai==0.27.2
playsound==1.2.2
python-dotenv==1.0.0
pyyaml==6.0
readability-lxml==0.8.1
requests
tiktoken==0.3.3
gTTS==2.3.1
docker
duckduckgo-search
google-api-python-client #(https://developers.google.com/custom-search/v1/overview)
pinecone-client==2.2.1
redis
orjson
Pillow
selenium
webdriver-manager
jsonschema
tweepy
click
pymongo
datetime

##Dev
coverage
flake8
numpy
pre-commit
black
sourcery
isort
gitpython==3.1.31

# Items below this point will not be included in the Docker Image

# Testing dependencies
pytest
asynctest
pytest-asyncio
pytest-benchmark
pytest-cov
```

```
pytest-integration
pytest-mock

flask
```

도커파일

```dockerfile
# 파이썬 버전
FROM python:3.8.5

# 클론해서 만들어질 디렉토리 이름입니다.
WORKDIR /AutoGPT
#  모든 파일을 WORKDIR로 복사
COPY . .
RUN pip install -r requirements.txt

EXPOSE 4000

CMD python ./main.py
```

실행 커맨드

- `python ./main.py`
